## **DETAILED ACTION**

### ***Response to Amendment***

1. The Examiner acknowledges the amended claims filed on August 5, 2008.

**Claims 1-33, 37, and 38** has been amended.

### ***Response to Arguments***

2. Applicant's arguments, see pages 18-19, filed August 5, 2008, with respect to claims 33-36 have been fully considered and are persuasive. The rejection of claims 33-36 has been withdrawn.

### ***Allowable Subject Matter***

3. **Claims 1-38** are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:

**Regarding claim 1**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the limitations of the present claim, that the stepless movement height connection allows the camera to slide relative to the electrical connector along a first axis to allow positioning of the camera relative to the electrical connector at one of a plurality of different heights along the first axis, wherein the stepless movement height connection extends beyond a height of the electrical connector along the first axis, wherein the plurality of different

Art Unit: 2622

heights extends along a majority of a height of the camera, and wherein the majority of the height of the camera is greater than a height of the electrical connector.

**Regarding claims 12 and 18**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the limitations of the present claim, that the electrical conductors are adapted to be removably connected to contacts of an electrical connector located along the first lateral side of the housing, and wherein a height of the electrical conductors along the first lateral side of the housing is sized and shaped to be greater than a height of the electrical connector when the apparatus is connected to the electrical connector.

**Regarding claims 19 and 23**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the limitations of the present claim, that the camera electrical connector comprises a camera receiving area adapted to receive a camera therein and make electrical contact at one of a plurality of different locations along a majority of a height of the camera inside the camera receiving area, wherein a height of the camera receiving area is sized and shaped to be less than a height between the plurality of different locations along the majority of the height of the camera when the camera is received in the camera receiving area, and wherein the camera receiving area comprises a through hole extending entirely through a housing of the camera electrical connector.

**Regarding claim 24**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the limitations of the present claim, that the camera comprises electrical conductors on a portion of a side

Art Unit: 2622

of the housing, wherein the electrical conductors directly contact electrical contacts of the electrical connector, and wherein a height of the portion of the side of the housing comprising the electrical conductors is greater than a height of the electrical connector.

**Regarding claim 33**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the limitations of the present claim, making electrical connection between the electrical connector and electrical conductors extending along a majority of a height of a first lateral side of the camera inside the slot of the electrical connector, wherein a height of the electrical conductors extending along the majority of the height of the first lateral side of the camera is greater than a height of the electrical connector.

**Regarding claim 37**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the limitations of the present claim, that the stepless movable height connection comprises a first portion connected to the device printed wiring board and a second portion connected to the camera, wherein a height of the second portion extends beyond a height of the first portion, wherein the stepless movement variable height connection allows the camera to slide relative to the device printed wiring board along a first axis to allow positioning of the camera relative to the device printed wiring board at one of a plurality of different heights along the first axis, wherein the plurality of different heights extends along a majority of a height of the camera, and wherein the majority of the height of the camera is greater than a height of the first portion.
